Prepping for Planting

Planting season will be here before we know it! Are you getting ready? We can help with:

- seed selection
- chemical programs
- planting prescriptions
- Climate FieldView
- Pivot Bio on-seed
- much more!

Pivot Bio PROVEN 40 replaces up to 40lb/acre of synthetic nitrogen, without risk of N loss to leaching, denitrification, or runoff. On-seed or in furrow available!

Tips for Managing Stored Grain During Fluctuating Weather

The fluctuating temperatures we've experienced recently can compromise the quality of stored grain. Dramatic shifts in temperature affect moisture within the bin and can lead to spoilage or crusting without proper management.

- Monitor grain temperatures at least every 2 weeks.
- Be aware of the daily temperature fluctuations in your area. Cool, damp nights often turn into warm days.
- Be extremely cautious if you do need to enter bins, especially if moldy grain or crusting is present.

What's New

Alloy E3 Soybeans

We are now carrying Alloy brand E3 soybeans. The Alloy 2023 class outyielded Pioneer E3 beans by an average of 1.2 bu/ac!

Seed Shipments

We currently have about 67% of total ordered seed on-site, with more shipments coming in weekly.
