Harvest Underway, Check Moisture

We started corn on the 5th & plan to start beans soon. Yields have been as expected. Crops dried down about 6% in three days last week & with warm, dry weather ahead they will keep drying quickly. We have seen as low as 14% moisture through the combine already. Be aware of your crop's moisture so you can make the best harvest decisions for your operation's goals. We wish all of our farmers a safe, bountiful harvest!

Pivot Bio Pricing & Early Incentives

Pivot Bio Proven40 offers up to 40 lbs of nitrogen per acre, delivered directly to the root zone all season long without risk of N loss due to volatilization, denitrification, leaching, or runoff. Maximize your savings with early payment and cash incentives. The first incentive deadline is October 1st for up to \$16/ac savings. Contact us to learn more & to place your order!

Harvest Safety Tips

Stay safe in the field and on the road! It is easy to get in a rush with such a busy season, but taking the time to check your equipment and surroundings can help protect you, your crew, and your family. Scan the QR code for more:

- Inspect equipment before each use
- Use grab bars when climbing up & down machinery or bins, & wear non-slip shoes
- Keep children and animals away from work areas and equipment in operation
- Stay hydrated to help maintain awareness
- Use reflectors, flashers, SMV signs, and place flags on each end of wide implements during transport
- Avoid entering grain bins when possible, but if you do need to enter, make sure someone else is there who can help if you become entrapped in the grain

Yield Contests

If you entered the NCGA corn yield contest, keep an eye out for your best corn. When you find it, let us know so we can do a supervised harvest.

Enter the Asgrow bean yield contest by November 22 and submit harvest data by December 15 for a chance to win a trip to Commodity Classic! Contact us to learn more.

Meristem Biologicals

Revline Hopper Throttle is an 80/20 talc/graphite combination featuring micronutrients, biofertility microbes, and Terrasym.

Replace your standard seed fluency agent to elevate crop performance.
