Commodity Classic 2025 In the Books

We attended the 2025 Commodity Classic in Denver, CO to celebrate our Asgrow yield contest winners and see the latest and greatest in the agriculture industry.

Congratulations again to Justin Dammann, Michael Meier, and Terry Carlson for their outstanding soybean yields!

It's Not Too Late to Order Pivot Bio!

Pivot Bio is a great way to diversify your nitrogen sources. Replace up to 40 lbs of synthetic nitrogen with Pivot Bio's nitrogen-fixing microbes that produce N all season long without risk of losses to leaching or volatilization.

Bayer Introduces Vyconic Soybeans

Bayer introduced Vyconic soybeans this month at Commodity Classic. Vyconic soybeans will be the first on the market with five herbicide tolerances stacked into one trait. Tolerance to glyphosate, glufosinate, dicamba, 2,4-D, and mesotrione will offer farmers more weed control tools and flexibility than ever before. We expect this exciting new technology to become commercially available in time for the 2027 growing season!

Act Now to Control Weeds, Not Farming

Protect access to glyphosate & other crop protection products by making your voice heard. The label is the law, but legislative uncertainty has led to conflicting state and federal label requirements, causing the litigation industry to open thousands of lawsuits. These lawsuits ignore the extensive testing & review the pesticides go through to obtain approval, & they threaten the future use of pesticides. Use the QR codes to send a letter to your elected officials encouraging them to protect farmer access to glyphosate & other crop protection tools at the state level. Planting Season Prep with FieldView

We'll be back in the field before we know it! Now is a great time to make sure everything is ready for when conditions are right.

- Update both FieldView apps and iPad operating system
- Ensure your FieldView subscription is active
- Connect FieldView Drive
- Update field boundaries
- Set up equipment in the FieldView Cab app
- Enter hybrids, treatments, and application names
