

Weather Outlook and Spring Preparations

A new season is nearly here! We know that every year has its own unique set of challenges, and the current spring weather outlook indicates we could have an interesting start. We are forecasted to have the wettest March in decades. A wet spring creates many challenges for farmers as you try to get your crop started off on the right foot, from poor field conditions to nutrient loss to increased disease risks and more. While we can't control the weather, we can be proactive to try to mitigate some of the risks. Here are a few things to consider:

- Monitor impacts of saturated soil, such as compaction, erosion, and biological activity.
- Scout early for emergence issues, seedling diseases, and pest & weed pressure.
- Upgrade your soybean treatment to ILEVO for protection against SDS & other diseases.
- Use Pivot Bio for a weatherproof N source that can't be lost to leaching or denitrification.

The Pivot Bio logo consists of a stylized green and blue geometric icon followed by the text "PIVOT BIO" in a bold, blue, sans-serif font.

The fertilizer market has been thrown into disarray, causing rising prices for most nitrogen sources. Pivot Bio, however, is **reducing their price** & extending discounts to help growers like you get the nitrogen your crop needs at a more affordable price. If you have not yet purchased or applied all of your nitrogen, consider replacing up to 40 lbs of synthetic nitrogen with Pivot Bio G3! The gene-edited microbes fix nitrogen all season long to feed your crop as it needs nitrogen. We apply it to the seed here, so there's no hassle for you. **We can treat any seed brand**, so even if your corn was not purchased from us, we can help you get the most out of your crop. Pivot Bio is also still offering **0% APR** when you finance with John Deere Financial or Rabo Agrifinance. Call Curt or Meghan to learn more about our own on-farm results, see what discounts apply to you, and place an order!

Dicamba Update

Stryax, Bayer's new dicamba formulation, is now approved for use in 24 states, including Iowa and Missouri. Note that Iowa has a supplemental label with additional restrictions, including an application cutoff in beans of June 12 or V4, whichever comes first. Always follow label requirements. Scan the QR code for more.

The Climate FieldView logo features the word "CLIMATE" in a small, blue, sans-serif font above the word "FIELDVIEW" in a large, bold, orange, sans-serif font, with a green leaf icon to the right.

Climate FieldView can help you manage your farm effectively with everything in one place. Create planting prescriptions, track field applications, take easy scouting notes, create field region reports, gain valuable insights, and more. Talk to us to see what FieldView can do for your farm and how you can get 15% off your annual subscription.
